#### Improving infusion device safety

Fifteen million infusions are performed in the NHS every year. The vast majority are delivered safely. However, at least 700 unsafe incidents are reported each year, of which 19 per cent are attributed to user error.

A National Patient Safety Agency (NPSA) pilot study has helped to confirm the root causes of those incidents where no fault with the equipment has been identified. These are: Equipment has been range of infusion device types than they need and too many with a higher specification than is necessary;

2 staff training is not a priority or competency-based: star during is not a provide or complete type based.
 devices of the same type have multiple configurations and react differently under the same circumstances.

## Definition

A Patient Safety Solution is any system design or intervention that has demonstrated the ability to prevent or mitigate patient harm stemming from the processes of health care.

## WHO Collaborating Center on Patient Safety Solutions

#### **Communication During Patient Hand-Overs**

Patient Safety Solutions | volume 1, solution 3 | May 2007

Gaps in hand-over (or hand-off) communication between patient care units, and between and among care teams, can cause serious breakdowns in the continuity of care, inappropriate treatment, and potential harm for the patient. The recommendations for improving patient hand-overs include using protocols for communicating critical information; providing opportunities for practitioners to ask and resolve questions during the hand-over; and involving patients and families in the hand-over process.

#### **Engaging Patients and Families**

- Provide information to patients about their medical conditions and treatment care plan in a way that is understandable to the patient.
- Make patients aware of their prescribed medications, doses, and required time between medications.
- Inform patients who the responsible provider of care is during each shift and who to contact if they have a concern about the safety or quality of care.
- Provide patients with the opportunity to read their own medical record as a patient safety strategy.

#### **Engaging Patients and Families**

- Create opportunities for patients and family members to address any medical care questions or concerns with their health care providers.
- Inform patients and family members of the next steps in their care, so they can be available to communicate this to the care provider on the next shift, and so they are prepared to be transferred from one setting to the next, or to their home.
- Involve patients and family members in decisions about their care at the level of involvement that they choose.

## **2008 Solutions**

- 1. Preventing Pressure Ulcers
  - Responding to the Deteriorating Patient
- 3. Communicating Critical Test Results
- 4. Preventing Central Line Infections
- 5. Preventing Patient Falls in Health Care Organizations

# Action on Patient Safety – High 5s

To achieve significant, sustained, and measurable reduction in the occurrence of 5 patient safety problems over 5 years in at least 7 countries and - To build an international, collaborative learning network that fosters the sharing of knowledge and experience in implementing innovative, standardized, safety operating protocols.

## **High 5s Solution Topics**

- Communication During Patient Hand-overs
   Performance of Correct Procedure at Correct Body Site
- Medication Reconciliation
- Control of Concentrated Electrolyte Solutions
- Hand Hygiene

## High 5s Participating Countries

- Australia
  - Canada
- Germany
- Netherlands
- New Zealand
- United Kingdom
- United States

## **Phases of High 5s Initiative**

- Phase One Launch and Development of Standardized Protocols
   Phase Two – Learning
- Phase Three Evaluation and Spread

# National Patient Safety Goals Annual selection of topics Patient Safety experts prioritize topics National Field Review of draft NPSGs Requirement of Accreditation

## 2008 National Patient Safety Goals

- . Patient identification
- 2. Communication among caregivers
- 3. Medication safety
  - Health care-associated infections
- 8. Medication reconciliation
- 9. Patient falls
- 10. Flu & pneumonia immunization
- 11. Surgical fires
- 13. Patient involvement
- 14. Pressure ulcers
- 15. Focused risk assessment (suicide; home fires)
- 16. Rapid response to changes in patient condition
- Universal Protocol for Preventing WSS

#### NPSG #13

Goal 13: Encourage the active involvement of patient and their families in the patients own care as a patient safety strategy

Requirement: Define and communicate the means for patients and their families to report concerns about safety and encourage them to do so.

# Speak

Help Prevent Errors in Your Care veryone has a role in making health care safe — physicians, health care executives, nurses and technicians. Health care organizations across the country are working to make health care safety a priority. You, as the patient, can also play a vital role in making your care safe by becoming an active, involved and informed member of your health care team.

An Institute of Medicine (IOM) report has identified the occurrence of medical errors as a serious problem in the health care system. The IOM recommends, among other things, that a concerted effort be made to improve the public's awareness of the problem.

The "Speak Up" program, sponsored by the Joint Commission on Accreditation of Healthcare Organizations, urges patients to get involved in their care. Such efforts to increase consumer awareness and involvement are supported by the Centers for Medicare and Medicaid Services. This initiative provides simple advice on how you, as the patient, can make your care a positive experience. After all, research shows that patients who take part in decisions about their health care are more likely to have better outcomes. To prevent health care errors, patients are urged to ...

Organizations can order campaign buttons that can be worn by staff.

Brochures can be printed that have a blank panel to allow for information about the organization, its commitment to patient safety, and the organization logo.

#### Speak Up

To help prevent health care errors, patients are urged to:

**S**peak up if you have questions or concerns, and if you don't understand, ask again. It's your body and you have a right to know.

Pay attention to the care you are receiving. Make sure you're getting the right treatments and medications by the right health care professionals. Don't assume anything.

Educate yourself about your diagnosis, the medical tests you are undergoing, and your treatment plan.

Ask a trusted family member or friend to be your advocate.

Know what medications you take and why you take them. Medication errors are the most common health care mistakes.

Use a hospital, clinic, surgery center, or other type of health care organization that has undergone a rigorous on-site evaluation against established, state-of-the-art quality and safety standards, such as that provided by the Joint Commission.

Participate in all decisions about your treatment. You are the center of the health care team.
